Weekly Report

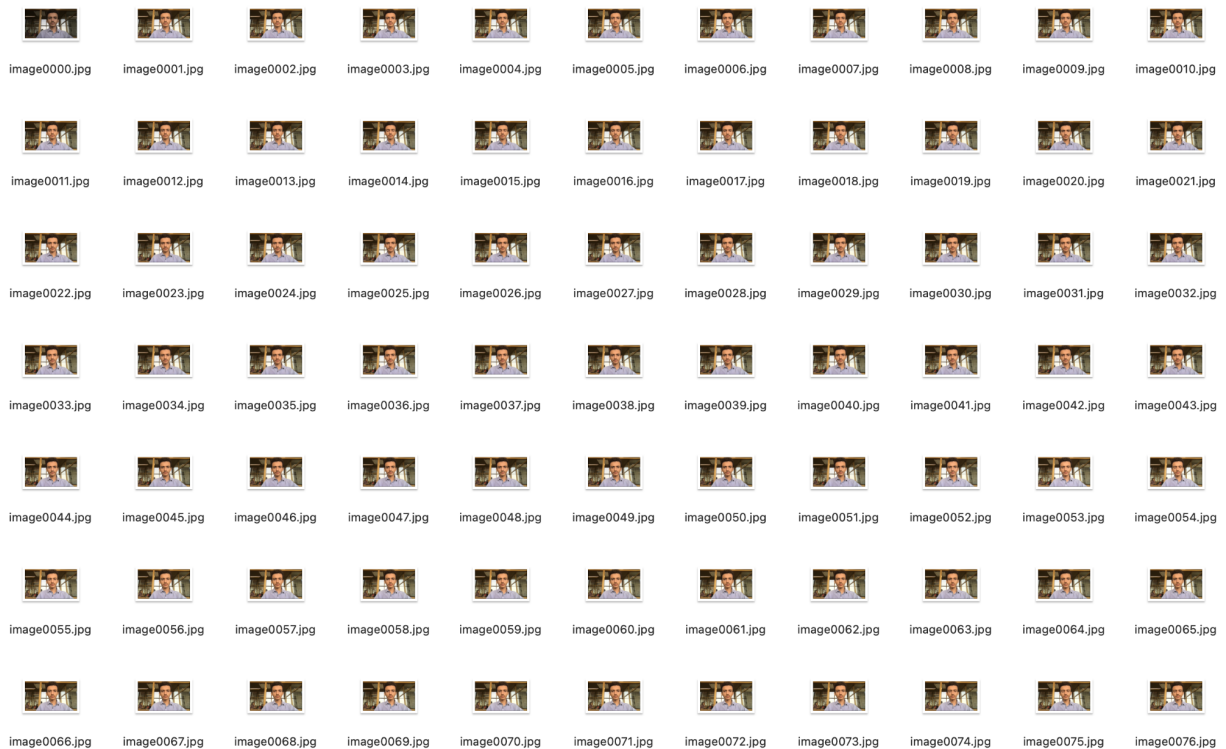

AU2040260 - Pratham Lalwani

AU2040167 - Daksh Suthar

Tasks performed in the week:

After implementing the haar cascade algorithm, we tried to capture images to train the model.

With the help of the haar cascade algorithm, we have captured 100 samples of images of a user to train the model.

Tasks to be performed in the upcoming week:

In the upcoming week, our next step is to implement a face recognition algorithm, i.e. lbp algorithm, for training and recognising the images. Then we will capture the image, and based on image training and face recognition, we will recognise that person's face.
