

Group 14:

AU2040167 - Daksh Suthar

AU2040260 - Pratham Lalwani

Overview:

This week, we focused on familiarizing ourselves with the project requirements and setting up the development environment. We installed the necessary dependencies, including Python, OpenCV, and the required libraries. We also reviewed the project documentation and code to better understand the project's scope and functionality.

Accomplishments:

Successfully set up the development environment for the project.

Installed Python, OpenCV, and other required libraries.

Reviewed the project documentation and code to understand the project requirements better.

Next Steps:

Next week, we plan to focus on implementing the face detection module using OpenCV and Haar Cascades. we will review the relevant OpenCV documentation and tutorials to ensure that we understand the implementation details and can develop the module accurately. We will also set up a testing framework to ensure that the module functions as expected and meets the project requirements.
